-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Applicants' traverse of the restriction requirement is not deemed persuasive, sine applicants have not given any reasons for the traversal. Accordingly the restriction requirement is made FINAL.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deeba et al in view of Yaluris et al. Deeba et al disclose a layered catalyst comprising a carrier, a refractory metal oxide disposed upon the carrier, a layer of platinum disposed upon the refractory metal oxide, and an oxygen storage component disposed upon the layer of platinum. (See the Abstract.) The difference between the catalyst disclosed by Deeba et al, and that recited in applicants' claims, is that Deeba et al do not disclose that the oxygen storage component should be vanadia. Yaluris et al teach at col. 7, lines 14-24 that vanadia is an oxygen storage component. It would be obvious from Yaluris et al to employ vanadia as the oxygen storage component in the catalyst of Deeba et al suggest that any oxygen storage component may be employed in the third layer, and there is no evidence on record of unexpected results which would emanate from the use of vanadia, as opposed to other oxygen storage components, in the third layer of Deeba et al when using the catalyst as a three-way conversion catalyst.

The other references are made of record for disclosing layered catalysts including platinum and vanadia.
